Move Image Review and Annotation Out of the Lab Onto Your Desk

Lab space is not always the best place to work with your study images and data. Access restrictions, PPE requirements and competition for lab time make this inconvenient.

MICRON Review Station lets you move images and data from the lab to your computer, enabling review, assessment, annotation, and OCT segmentation in relative comfort outside the lab.

MICRON Review Station is a full version of MICRON Software Suite, only without image acquisition capabilities.

MICRON Review Station allows you to:

- **Review and compare** images within and across imaging sessions
- **Add and edit Tags**
- **Segment OCT images using Ai/ML tools** inside Review Station without exporting your images to a separate software application
- **Select and save frames** from videos
- **Export images** and data for further analysis in tools like ImageJ

MICRON®
Review Station

Powered by MICRON Software Suite

MICRON Review Station respects the **role-based security** that's built into MICRON Software Suite. A smart export/import mechanism makes it safe and easy to copy images and data from the MICRON Control Unit in the lab to your MICRON Review Station-equipped computer in your office.

Features with You in Mind

Get out of the Lab: Perform segmentation and other image and data-centric work outside the lab, accumulating data and images across the duration of a study

Easy Learning Curve: MICRON Review Station based on MICRON Software Suite (MSS), allowing you to use the same tools and user interface inside and outside the lab

Keep source images safe: Intelligent export/import means your source images in the lab cannot be overwritten or deleted by using MICRON Review Station

Access Control: We know MICRON systems may be shared. With user control enabled in MSS, users can only access and export images for which they have explicit access

MICRON Review Station runs on Windows 11 computers and laptops

Please contact your MICRON sales representative for more details.

Please note: MICRON Review Station is only compatible with MICRON Software Suite and does not support legacy Discover and Reveal software.
